The Aesculap Endosurgery division of B. Braun Medical Ltd is proud to be attending this year's Meeting as a Platinum Partner of the ALSGBI. We will be showcasing our diverse Endosurgical range for laparoscopy which includes reusable and single use instruments, ligation clips, hybrid solutions, laparoscopes, needle holders, laparoscopic ports, light cables, full HD camera and digital documentation, all with the pedigree of the world's largest surgical instrument company.

We will be showing clips filmed with our EinsteinVision 2.0 3D camera system. Here, we provide you access to full native HD 3D laparoscopic imaging, coupled with a number of unique and innovative features, which are making EinsteinVision the benchmark in 3D laparoscopic surgery. Additionally hands-on challenges will be set up allowing you to experience the difference another dimension can make – why not try one of our timed tests?

Our Caiman advanced energy seal and cut device will be available allowing you to experience the longest jawed vessel sealing device currently available, with an innovative design including tip first closure, even tissue compression with cold cutting and blunt dissection capabilities. Please try our range of handpieces, including our articulating device, allowing perpendicular access to vessels and maximizing bust pressures, offering increased efficiency and one seal confidence.

Please visit stand 28 to meet our team and learn more about our exciting and innovative products.
MÖLNLYCKE HEALTH CARE

STAND 13

Mölnlycke Health Care is proud to be a Platinum Sponsor of the ALSGBI Annual Scientific Meeting and is delighted to showcase a new comprehensive range of trocars and instruments. Mölnlycke Health Care has a vast experience manufacturing high-quality surgical products, including Biogel, ProcedurePak, HIBI and BARRIER.

Mölnlycke Health Care is a world-leading provider of single-use surgical and wound care products for customers, healthcare professionals and patients. We develop and bring to market, innovative wound care and surgical products along the entire continuum of care – from prevention to post-acute settings.

Our complete laparoscopic solution includes trocars, instruments, laparoscopic drapes and laparoscopic tray components. The Mölnlycke Health Care laparoscopic solution complements and drives theatre efficiency as the range of products can also be included as part of our customised laparoscopic trays. Your own truly customised laparoscopic solution with everything you need for each specific procedure in a single, convenient and cost-effective package.

Please visit stand 13 to meet our team and learn more about our exciting range of products.
KARL STORZ ENDOSCOOPY (UK) LTD

STAND 22

KARL STORZ Endoscopy (UK) Ltd is proud to be a Platinum Sponsor of the ALSGBI Annual Scientific Meeting for the 9th consecutive year.

KARL STORZ's connection with laparoscopic surgery has a long history. We continue to stand side by side with surgical teams and professional bodies as partners in the ongoing duty to innovate, educate and improve the quality and safety of laparoscopic surgery worldwide.

Innovation can take many forms and, as health economics plays an increasingly important role in determining the best therapeutic pathway, we must increasingly seek to design more sustainable and efficient systems to deliver surgical services.

At ALSGBI this year there is a focus on innovative procurement, and how hospitals can work in partnership with industry to deliver better value to the NHS.

Many of us are familiar with pressure on theatre budgets, ageing equipment portfolios, and the challenge in maintaining instrumentation to ensure standards are met in outcomes, safety, and theatre utilisation.

KARL STORZ designs a comprehensive range of services to ensure that theatre equipment is properly managed and maintained throughout its working life. We are confident that when examined from a best value perspective, these solutions can deliver better long term value than ‘make do and mend’.

The risks and inefficiencies related to poorly performing equipment are too numerous to list in this article, but if you can relate to the problem, and would like to discuss some innovative thinking around this subject, then please come and visit us on stand 22 for a chat about your situation, or contact us via email to find out more.
Olympus Medical is delighted to showcase the latest cutting edge surgical imaging and energy devices: VISERA 4K UHD imaging platform and THUNDERBEAT Type S.

VISERA 4K UHD provides four times the resolution of full HD and features excellent colour reproduction. This broader range of hues enables more detailed colour calibration, facilitating the identification of blood vessels and other fine tissue, helping to improve visibility and allowing for more precise and safe surgery.

This high level of detail enables surgeons to use a significantly larger monitor, such as a 55-inch, magnifying the image; providing an immersive experience to achieve better surgical outcomes.

THUNDERBEAT Type S with Intelligent Tissue Monitoring is the next generation for safety and speed, integrating the benefits of both ultrasonic and advanced bipolar energy but with improved jaw design for finer dissection and optimal energy delivery for efficient haemostasis.

Both systems can be seen on the Olympus Medical stand 23.
APPLIED MEDICAL UK LTD

STAND 24

As a new generation medical device company devoted to meeting the fundamental demands of healthcare, Applied Medical believes that enhanced clinical outcomes and availability of care must be coupled with exceptional value. Applied Medical is well recognized for clinical advancements including the Kii® access systems, Voyant® intelligent energy system, GelPOINT® and GelPort® platforms, Epix® instrumentation, Alexis® wound protectors/retractors, and the Inzii® universal retrieval systems.

ARTHREX LTD

STAND 6

Arthrex has developed more than 9,500 innovative products and surgical procedures to advance minimally invasive orthopaedics worldwide. Medical Education is at the core of Arthrex's foundations and our philosophy of ‘Helping surgeons treat their patients better’ has not only shaped our principles and history but is guiding us into the future. This core value is why we are again this year proudly supporting the LapPass training programme. The Arthrex Mobile Skills Lab will be on site at the meeting and will have the laparoscopic LapPass assessments ongoing during the Congress.

Arthrex is recognised for the innovation and excellence of its products as well as the service, support and training it provides to its customers. With the first to market 3 chip Ultra HD – 4K imaging technology, Arthrex can offer surgeons, across all surgical disciplines, market leading laparoscopic visualisation technology four times greater than the high definition systems currently available.

Please visit us and see our technology at first hand at Booth 6, to see the next generation in visualisation technology including our Big Screen Surgery options.

COOK MEDICAL
STAND 14
We won’t be satisfied with the state of surgery until every person who enters the operating room has a positive outcome. We've been working towards that goal by partnering with surgeons, sharing advanced techniques, and making devices that can help in even the most complex cases.
In 1963, Cook Medical’s founder, Bill Cook, worked with a surgeon to launch the field of minimally invasive medicine. Now we continue his vision worldwide, through educational programmes like Cook Vista and through technologies like Biodesign and Zenapro.
Our goal is to deliver devices that give the best outcomes to surgeons, hospitals, and – most importantly – patients.

**Fisher & Paykel Healthcare Ltd**

**STAND 21**

Fisher & Paykel Healthcare entered the respiratory market in 1971 with the development of a unique respiratory humidifier for use in critical care. We now offer a broad range of humidification products for use in Critical Care, Obstructive Sleep Apnoea and more recently the Surgical Environment.

The HumiGard Surgical Humidification System has been designed to protect the peritoneum against damage caused by cold, dry surgical gas during laparoscopic surgery. The surgical gas from the insufflator is humidified and heated, then maintained at 37°C and 100% relative humidity until it reaches the patient, enabling the peritoneum to remain moist and warm.

HumiGard has been shown to maintain normothermia, prevent post-operative pain and improve recovery time following laparoscopic surgery. More recent data would suggest HumiGard can reduce surgical site infection rates during colorectal surgery.

SWORD (SURGICAL WORKLOAD, OUTCOMES & RESEARCH DATABASE)

STAND 12

SWORD is back!

ALSGBI and AUGIS launched SWORD a year ago. It has been offline for a few months having a rebuild with software and licensing being updated. We are pleased to re-launch it again at the ALSGBI 2016 Annual Meeting.

The new site now has 9 main groups of data to access – from hernias to endocrine surgery, anti-reflux surgery to appendicectomy. The data is HES data sorted by consultant attribution coding (ie all work performed in your name) and grouped into hospital trust and regional levels. The data is updated quarterly and is only accessible to AUGIS and ALSGBI members and is pseudonomised (i.e. only you know which is your anonymised consultant number in the data tables – visit the stand and learn more and get access to the site. You can request your own ID code to identify your own data, by emailing the ALSGBI before or after the meeting.

The data allows you to see your activity using a mixture of standard dashboard data (eg re-operation rates, readmission rates, length of stay, day case rates) and data related specifically to that procedure (eg proportion of cholecystectomies carried out within 10 days of an episode of pancreatitis or cholecystitis). You will also be able to compare yourself to your peers locally and to the national averages. In the consultant view you will be able to cut and paste summary sheets of your activity for that year for your appraisal folder. In due course we hope to have an easier printable format. Please give us feedback if you have suggestions or have found errors in the program or your data.

We plan to further increase the range of procedures over the next year and release some of the other datasets which include data on paediatrics, inflammatory bowel disease and UGI cancer sets. There will be a demonstration during the scientific programme at the ALSGBI ASM 2016 meeting on Thursday 10th November of what can be achieved and an opportunity to come and try it out on stand 12.

Mr Ian Beckingham, Past-President AUGIS
Mr Mark Vipond, Past-President ALSGBI
